THE ECONOMICS IN CHOOSING TIRES FOR THE RIGHT OPERATION

As part of ACEL's continuing efforts to be of service to its members, we will offer an Affordable seminar on "*The Economics in Choosing Tires for the Right Operation*" to be conducted by Higantis Contractors Corp. at Luna Room, World Trade Center Building, Gil Puyat Avenue Extension cor., Diosdado Macapagal Blvd. Pasay City on November 10, 2018 (8:00 A.M. to 12 NN) during Philconstruct Manila 2018

Seminar Description:

Tires being one major cost factor in the operations of a fleet, the module is designed to validate awareness of participants when deciding to purchase and utilize these expensive items. There are the basics but there are proven techniques in maximizing investments on tires---investments because money spent on them must contribute to the project's profitability. When not given sufficient attention, one is left wondering where the money went. More importantly perhaps, are there means to ensure that, at the end of the project, is there remaining life from the investment that should translate to ending/useful inventory.

Course Outline:

- 1- The Nomenclature of a Round, Black object called Tire
- 2- Why are they expensive but how come some say tires "MIC" are cheap
- 3- Who decides what to purchase for which kind of equipment and operations; what parameters are in use to make a sound decision
- 4- Is a recapping or retreading or repairs viable option, is there such a thing as product warranty that can make a supplier return the portion of money paid because the product failed? When can you call it premature failure that warrants return of payment?
- 5- Is it time to have an in-house tire repair system? Can damages on tires be charged to the equipment operator?
- 6- What is the true measure of a tire's load-carrying capacity to match the equipment?
- 7- How to put value on tire inventory, used and new alike? Is there a way to identify if company tires are being replaced with inferior 3rd party property?
- 8- Can you forecast the wear and tear of tires to support a procurement projection?

NOTE: The participants are encouraged to bring their data on tire cost or utilization; equipment list if possible.
